Re: Gold Strike Mine, Phase I
Construction Permit Conditions

Dear Mr. Kluksdahl:

We have reviewed the submittal from JBR consultants received 6 December 1988 which provides information relative to a special condition of our 3 November 1988 construction permit.

The special condition requiring a detail of the emergency overflow pipe for the water pond is deemed to be fulfilled upon review of the following information:

- a. Discharge from the emergency overflow from the process water pond will be directed into a drainage which has a sediment control dike to prevent it from flowing unrestrained down the drainage.
- b. Twenty four (24) inch diameter ADS corrugated HDPE plastic pipe as indicated in the 6 December 1988 letter from JBR Consultants will be used.
- c. Provisions will be made so the discharge from this pipe will not erode support for the pipe.
- d. Per phone communication with Mr. Brian Buck of JBR Consultants, we understand that the invert of the spillway pipe from the process water pond is five (5) feet below the top of the ponds dike.

In any event, the Bureau of Water Pollution Control must be notified within twenty four (24) hours of activation of the emergency overflow by telephone. Within seven (7) days after activation of the emergency overflow a written report of the discharge including start date, stop date, amount, quality etc of the discharge must be received by the Bureau.

Ken A. Kluksdahg
